

Sawing reinvented:

**Clean cut edges  
on both sides.**

**NEW!** Jigsaw blades Extra-clean for Wood.  
For tear-free straight and curved cuts in wood.  
[www.bosch-pt.com](http://www.bosch-pt.com). **Professional quality. Universal application.**

**BOSCH**

Invented for life

Particularly fine, clean,

# tear-free, straight and curved cuts on both sides in wood.

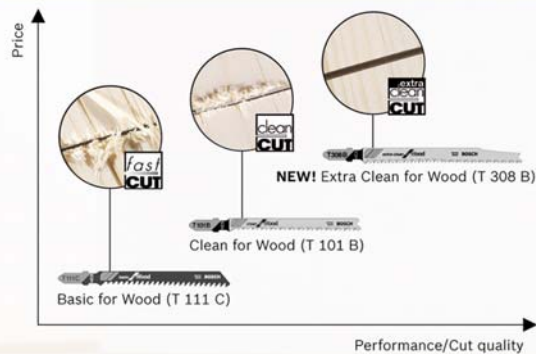

An absolute first:

- ▶ Tear-free, straight and curved cuts on both sides in wood; regardless of whether the jigsaw is guided from above or below.
- ▶ The wood no longer has to be marked from underneath, making incorrect marking a thing of the past.
- ▶ Edge finishing is not required.
- ▶ For clean and accurate working with high cutting speed and long lifetime.

The teeth make it all possible: the tooth strip with its revolutionary tooth geometry\* results in this exceptional work.

\*patent pending

## The right jigsaw blade for any requirement

Type

Length of teeth (mm)

Tooth pitch (mm)

**Optimum cutting action due to the integrated pre-cutting function:**

- ▶ Two rows of teeth arranged at different angles.
- ▶ Teeth cuts into the material at an optimum angle from above and below.

**Scalpel tooth: tear-free cuts on the bottom of the material**  
Razor-sharp, cross ground teeth that cut wood fibres like a scalpel on the reverse side of the material.

**Pointed tooth: tear-free cuts on the top**  
Precision-ground pointed teeth with optimised clearance and hook angles separate the wood fibres in a pull-cut motion on the top surface of the material.
